

The Trusted and Responsible Choice

Tanalised® E Pressure Treated Wood is the trusted first choice for the discerning user in our rapidly changing environment

Until now, there has been little choice with regard to treated wood for those more environmentally sensitive applications. Now you have the choice of a product that :

- is the **only** treated wood product in South Africa **independently verified** as contributing to achieving **Green Building Rating Tool Credits**
- contains **preferable ecological characteristics** compared to other products in its category
- is pressure treated with internationally recognised **Copper Azole Chemistry**
- conforms to the **latest international directives** regarding treated wood for **close human contact**
- **reduces the impact on the environment** compared to other technologies due to the latest treatment plant technology

Independent Verification has been undertaken by Ecospecifier Global:

- Green Building Scheme Pre-Assessment has been conducted on Tanalised® E wood and found that it is likely to contribute to the achievement of Green Building Rating Tool Credits.
- Key manufacturer health and ecological claims have been verified in a thorough scientific manner using Life Cycle Thinking Analysis combined with health and eco-toxicity screening
